Louisiana Health Report Card Submitted to the Governor and the Louisiana Legislature January 14, 2016

2015 Louisiana Health Report Card

As mandated by R.S. 40:1260

John Bel Edwards

Governor

Dr. Rebekah Gee

Secretary
Department of Health and Hospitals

J.T. Lane

Assistant Secretary
Office of Public Health

Joseph Foxhood

Director Center for Population Health Informatics

Submitted to the Governor and the Louisiana Legislature January 14, 2016

Executive Summary

In 1995, the Louisiana legislature passed Act 985, which required that the Louisiana Department of Health and Hospitals prepare a yearly report card describing the overall health of its citizens and health-related issues. In addition to informing Louisianans on the overall health circumstances in our state, this annual publication is an effective tool for health planning and evaluating the effectiveness of health programs.

This year's report includes:

- Demographic information for the state and the nine DHH regions
- Births, low birth weight and teenage birth numbers
- Leading causes of injury deaths
- Infectious diseases, rates and counts
- Chronic diseases, uncontrollable risk factors
- Surveillance in sexually transmitted diseases

The Louisiana Health Report Card is divided into seven chapters:

- a) Health Findings of Major Diseases
- b) Teenage Pregnancy and Birth Rates
- c) Rates of Low Birthweight Babies
- d) Suicide and violent deaths
- e) Sexually Transmitted Diseases
- f) Incidence of Drug Addictions
- g) Infectious Diseases

The appendices to this document contain the Vital Records Report for 2015.

Health Findings of Major Diseases

The tables below highlight Louisiana's ranking in four major disease categories: 1) cancer, 2) heart disease and stroke, 3) obesity, and 4) diabetes. As of 2014, Louisiana ranks:

47th in deaths due to cancer

46th in death due to heart disease and stroke

45th in percentage of obese adults

45th in percentage of adults with diabetes.

Number of cardiovascular disease (heart attack and stroke) deaths per 100,000 people Louisiana, Neighboring States, and United States, 2014

CANCER IN LOUISIANA

Since hospitals are required to report cancer cases within six months of the initial cancer visit, there is an inherent delay in case reporting to the central registry. The reporting delay allows for the collection of information related to cancer treatment. The Louisiana Tumor Registry (LTR) collects additional cases from smaller hospitals and physician offices and manually consolidates the information with reports from other sources. All cases are edited, both programmatically and manually. In late 2015 the LTR submitted its 2013 cases, exceeding the 95% completeness rate required by the Surveillance, Epidemiology and End Results (SEER) Program of the National Cancer Institute.

More information on the Louisiana Tumor Registry can be found at: sph.lsuhsc.edu/louisiana-tumor-registry.

The following data was taken from the Louisiana Behavioral Risk Factor Surveillance System (BRFSS), a national telephone survey that collects data about state residents regarding their health behaviors and chronic health conditions. All civilian, non-institutionalized state residents aged 18 and older with a household landline telephone are eligible for survey participation. Respondents were selected randomly from the sample of eligible individuals.

The primary purpose of the survey is to provide population-based estimates for chronic disease and the associated risk factors for Louisiana residents. The results of the survey are used by public health agencies, non-profit organizations, academic institutions, state agencies, and others to develop initiatives and programs to improve the health of Louisiana residents.

Teenage Pregnancy and Birth Rates

Louisiana ranks 44th among states in the reported number of births among females ages 15 to 19 years of age, per 1,000 females. The number of births (43.1) is approximately 14 more per 1,000 females than that of the US rate (29.4.) Among Louisiana parishes, East Carroll, Madison, and Vernon parishes had the highest teenage birth rates. Lincoln, St. Tammany, and Natchitoches parishes had the lowest teenage birth rates. In relation to overall number of births, the parishes of East Baton Rouge, Jefferson, and Orleans accounted for 21% of teenage births among all Louisiana parishes.

Rates of Low Birthweight Babies

A low birthweight infant is defined as an infant weighing less than 2,500 grams (5 pounds, 8 ounces) at birth. About 70% of low birthweight babies are premature, which is birth before 37 weeks of pregnancy. Fetal growth restriction, the infant not gaining the weight she should before birth, is the second main reason for low birthweight babies. Medical risk factors for having a low birthweight baby include preterm labor, chronic health conditions, infections, placenta issues, or a previous low birthweight pregnancy. Behavioral risk factors includes smoking, alcohol consumption, or drug use during pregnancy. National studies indicate that being younger than 17 years of age, older than 35 years of age, having little education, and having low income also correlate to low birthweights.

Preterm infants who have a lower than normal birth weight are at higher risk of experiencing neurological problems, respiratory and gastrointestinal disorders, developmental problems, and slowed growth. Low birthweight infants who survive are more likely than normal weight infants to have brain damage, lung and liver disease, subnormal growth, developmental problems, and other adverse health conditions. The effects of low birthweight follow these infants throughout life, with a greater likelihood of physical, intellectual, and behavioral impairments. In the long run, higher proportions of low birthweight infants are enrolled in special education classes relative to their normal birthweight counterparts.

The costs of low birthweight deliveries is much higher, with an average cost of \$15,000 and a hospital stay of 12 days, compared to \$600 and 2 days for full-term, normal weight babies. Nationally, Medicaid is the designated payer in 42% of cases.

In 2014, Louisiana ranked 49th in low birth weight births with 10.8 percent versus the US rate of 8 percent.

^{**2014} DATA IS PRELIMINARY

Suicides and Violent Deaths

In 2014, Louisiana ranked 12th for self-harm related deaths (suicides) among all states at 12.5 deaths per 100,000 people. This number is lower than that of the US rate of 12.9 deaths per 100,000 people. As it related to homicide and violent deaths, Region 1 had the highest rates of this type of deaths. Evangeline parish reported the highest violent deaths rate in the state, at 59.3 deaths per 100,000 people.

The term "suicide" includes the following causes of death:

- a. Intentional self-harm
- b. Intentional self-harm by discharge of firearms
- c. Intentional self-harm by other means

Sexually Transmitted Diseases

Sexually transmitted diseases continue to pose a significant impact to the health of the population of Louisiana. In 2014, Louisiana ranked in the top three for the following STDs: chlamydia, gonorrhea, and syphilis. The reported rates for each of these STDs were significantly higher than the US average. The reported rates for these three conditions highlight a growing problem for the population that increases the risk for contracting infections, such as HIV.

Chlamydia – Rates of Reported Cases per 100,000 residents Louisiana, Neighboring States, and United States, 2014							
	Rate National Ranking						
United States	456.1						
Louisiana	621.5	3					
Alabama	600.2	4					
Arkansas	527.3	8					
Mississippi	655.4	2					
Texas	496.1	12

STATE DEMOGRAPHICS

All data in the following tables are taken from the Louisiana Behavioral Risk Factor Surveillance System (BRFSS) for 2011, 2012, 2013 and 2014. These survey results describe data collected on adults 18 years of age and older. Because the BRFSS survey results are taken from a weighted sample of the population, the accuracy and precision of the estimates is dependent on sample size and sample bias. Where the sample size was too small to provide a valid estimate, NA (not available) was entered.

APPENDIX A

BIRTH WEIGHTS < 1500 GRAMS AND < 2500 GRAMS AS A PERCENTAGE OF TOTAL BIRTHS BY PARISH OF RESIDENCE, RACE OF MOTHER, AND SEX OF CHILD LOUISIANA, 2014

Appendix A provides for parish-level data describing low birth weight births by the rate of the mother and the gender of the child. For purposes of this summary, race has been defined as the following groups: black, white, and other. Appendix A highlights that among race groups, LBW births were greated among all infants born to black mothers at 15.1% of total births. This is significantly higher than the rates for births to "white" and "other" mothers. This trend was found across those parishes with the highest volumes of total births, which includes East Baton Rouge, Jefferson, Orleans, Caddo, and Lafayette.

APPENDIX D

REALLOCATED TO MOTHER'S USUAL RESIDENCE AND SHOWN BY RACE OF CHILD AND INFANT DEATHS (EXCLUSIVE OF STILLBIRTHS) BY PLACE OF OCCURRENCE AGE AT DEATH

LOUISIANA, 2014

total, 176 deaths (36%) occurred within less 24 hours of birth. Additionally, an equally sizeable fraction of infant deaths occurred from Day 28 to Day 365 (1 year) and represented 41 percent of infant deaths in In 2014, there were a total of 491 reported deaths among infants within the first year of life. Among this

Of those parishes reporting greater than 20 infant deaths,

Caddo – 31 (12 < 1d) (.39)

East Baton Rouge – 74 (34 < 1d) (.459)

Jefferson – 39 (15 < 1d) (.385)

Lafayette – 20 (9 < 1d) (0.45)

Orleans – 26 (8 < 1d) (.307)

Ouachita – 27 (8 < 1d) (.296)

30-46% of deaths occurred in less than 24 hours (1 day).
